

1150-1183 BUTTERFLY VALVES + SF SWITCH BOX

FEATURES

1150-1183 butterfly valves + SF are intended for the manual disconnection of very diverse fluid pipes, providing position display and feedback information to the control. The valve body is made of GS cast iron. The different configurations of the butterfly materials and of the liner make it suitable for many applications. Wafer mounting with centring ears between PN10/16 and ANSI 150 flanges. The SF switch box is equipped as standard with 2 dry contacts. Due to its IP67 leak-tightness, it can be installed both indoors and outdoors. Different contacts and detectors are available as options. Lockable handle.

1141 SK

LIMITS OF USE

Fluid pressure: WP	16 bar up to DN 300 10 bar up to DN 400
Fluid temperature: WT°	According to the table below
Ambient temperature	-15°C / +80°C
Index of protection	IP 67

AVAILABLE MODELS

DN 32 -40 to DN 400.

Connection between flanges PN10/16 and ANSI 150 RF.

2 x M20x1.5 electrical connections.

Ref.	Butterfly	Liner	Example of applications	WT° min	WT° max

1150-1183 BUTTERFLY VALVES + SF SWITCH BOX

114x, 115x AND 116x VALVES + SWITCH BOX

ASSEMBLY AND MAINTAINANCE INSTRUCTIONS

1/ CHECKS AT ACCEPTANCE

1.1 - order number check

The valve code is shown on the SECTORIEL label affixed on the actuator. Check that the code is identical with that shown on the delivery slip and the acknowledgement of receipt of your order.

1.2 - valve diameter check

The valve code is also shown on the SECTORIEL label affixed on the actuator. Check that the diameter matches that of your pipe installation.

1.3 - flange standard check

114x and 115x +AP valves have smooth lugs for mounting between PN10/16 flanges as per the EN 1092-1 standard and ANSI 150 as per the ANSI B16.5 standard. Check that the flanges of the pipe installation correspond to one of these standards.

The 1160-61-62-63-64 valves have internally threaded lugs. They are compatible with PN10/16 flanges up to DN150 and PN10 from DN200 to DN300 as per the EN 1092-1 standard. Check that the pipe installation is as per the standard.

1.4 - fluid and ambient temperature parameter check

The pressure and temperature limits for the valve in service are shown in the table below. Check that, for your service, the pressure and temperature are compatible with the limits.

Fluid pressure: WP	16 bar up to DN 200 10 bar up to DN 400
Fluid temperature: WT	According to the table below
Ambient temperature	-15°C / +80°C
Motor compressed air	minimum 6 bar / maximum 10 bar

2 / STORAGE INSTRUCTIONS

Follow our "IMESTOCK" instructions for storage.

3 / ASSEMBLY INSTRUCTIONS

3.1 - Place of installation

The **114x, 115x and 116x** +AP automatic valves can be installed both indoors and outdoors, while complying with the limit temperatures given in § 1.4.

If the valve is equipped with accessories (switch box, pilot solenoid valve), check their service temperatures and their IP code depending upon the place of installation.

Information given as an indication only, and subject to possible modifications

1150-1183 BUTTERFLY VALVES + SF SWITCH BOX

3.2. - Connection to the pipe installation

3.2.1 - Mounting positions

The automatic valve has to be mounted either vertically or horizontal ly with an actuator, as shown in the diagram below:

DN40 - DN150

DN200 - DN400

Authorised with
suitable support

Authorised with
suitable support

Information given as an indication only, and subject to possible modifications

1150-1183 BUTTERFLY VALVES + SF SWITCH BOX

3.2.2 - Mounting at the end of a line

114x and 115x butterfly valves must not be installed at the end of a line. Only the 116x valves can be installed at the end of a line.

Possible blocking of the butterfly: protruding length.

At valve opening, the butterfly protrudes from the body according to the lengths shown in the table below.

DN	40	50	65	80	100	120	150	200	250	300	350	400
Protrusion (mm)	3,5	3,5	9,5	17	24	33,5	45,5	69	90	110,5	131	148

You must take it into account at mounting and not abut another valve element immediately upstream and downstream which could block the movement of the butterfly (e. g. a swing valve).

3.2.3 - Mounting precautions:

Before any intervention on the valve, please follow the following indications:

Before installing the valve, clean the piping (brazing residues, metal swarf, sealing material, etc.).

Isolate the pipe installation upstream and downstream.

Bleed the pipe installation in order to bring it to ambient temperature and pressure.

Do not force the piping to align it so as to prevent applying stress on the valve body.

Wear the safety equipment required for this type intervention (gloves and goggles).

Information given as an indication only, and subject to possible modifications

1150-1183 BUTTERFLY VALVES + SF SWITCH BOX

3.2.4 - Valve installation on the piping

For all asymmetrical devices, check their orientation with regard to the normal direction of flow, and you must mount them in their operating position.

The gap in-between flanges has to be large enough to allow the valve be inserted without the elastic liner getting caught. The butterfly has to be in an almost closed position.

The liner can get damaged if the counter-flanges are not sufficiently spaced.

The butterfly has to be in the fully open position after positioning the valve in-between the counter-flanges and before tightening the bolts, otherwise the elastic liner might be deformed or deteriorated during the tightening of the first manoeuvre.

Information given as an indication only, and subject to possible modifications

1150-1183 BUTTERFLY VALVES + SF SWITCH BOX

3.2.5 - connection to the pipe installation

3.3 - switch box connection to the electrical control network

The electrical connection shall be performed by qualified personnel, as per the standards in vigour.

Depending on the supply voltage, the components

3.4 - operating test

Perform an operating test as follows after having made the pneumatic and electrical connections:

A / opening test

- power the coil of the pilot solenoid valve,
- visually check that the valve is open: the switch box indicator must show the OPEN position,

b / closing test

- turn off the power supply to the coil of the pilot solenoid valve,
- visually check that the valve closes instantaneously: the switch box indicator must show the CLOSED position.

Information given as an indication only, and subject to possible modifications

1150-1183 BUTTERFLY VALVES + SF SWITCH BOX

4 / MAINTENANCE INSTRUCTIONS

4.1 - Before any intervention

4.1.1 - Depressurize, drain and bring to ambient temperature, the pipe installation on which the valve is mounted.

4.1.2 - Wear suitable protective equipment.

4.1.3 - Provide means of lifting and support appropriate for the maintenance operation.

Maintenance:

The absence of leak at the liner and at the valve stem should be regularly checked. If a leak occurs at the stem, replace the o-ring, if it occurs at the liner, the liner has to be replaced.

Important: All maintenance and servicing operations must be performed under the best safety conditions. Before any intervention, the valve has to be removed taking the above-mentioned precautions which apply both to mounting and removal.

Worn part replacement:

Remove the motor actuator. Unscrew the screws (6), remove the circlips (4). This frees the shaft (5), thus enabling the liner (2) and the butterfly (3) to be taken out of the body (1). Replace the worn parts: To obtain the list of spare parts for every valve, please contact our technical department at: +33 (0)474 94 90 70

Information given as an indication only, and subject to possible modifications

1150-1183 BUTTERFLY VALVES + SF SWITCH BOX

4.2 - Valve maintenance

In the event of a leak on the line, check the state of the butterfly (1) and of the liner (4). If need be, replace them.

Codes of spare parts:

DN	Liner					Butterfly		Stem
	EPDM	EPDM C	NBR	SILICONE	FKM	cast iron	Stainless steel

300	985955					9865039	9865029	9865049

In the event of a leak at the stem, check the state of the o-rings of the stem.

4.3 – Switch box maintenance

Refer to the switch box's IME.

5 / INSTRUCTION ON OUR PRODUCT DISPOSAL AND RECYCLING

Our valve does not contain any hazardous substance. At the valve end of life, after removing the equipment, the user's obligation is to call a scrap metal collector who will sort and recycle the different parts of the equipment. For your information, the following families of metal are present in our product: steel, stainless steel and aluminium.

With regard to the electrical parts of the equipment, they have to be separated from the rest of the valve and given to a company specialised in recycling waste from electrical and electronic equipment, as per the directive 2002/96/EC.

SF-TYPE SOLDO SWITCH BOXES

FEATURES

The SF-type switch box is intended for equipping quarter-turn pneumatic actuators and manual valves. It makes it possible to have an easy, direct view of the valve position and of the feedback information to control. Of robust construction, it can be installed outdoors. The position indicator provides a very good visual reading of the valve position. The SF switch box can be equipped with many switches and detectors (see below). The notched cams can be manually adjusted with great accuracy, and are insensitive to vibrations.
