

1113-1114 BUTTERFLY VALVES WITH AP RE PNEUMATIC ACTUATORS

FEATURES

The 1113-1114 double-offset butterfly valve is a high-performance valve. It is designed for the automatic shut-off of high-pressure and/or high- and low-temperature fluid pipes such as steam, bitumen, heating oils, alkalis, etc. The valve has a direction of mounting, but the seat leakage is, however, bi-directional. The single-block stem of the butterfly is mounted on bearings and has an antistatic device. Due to its fire safe construction, the valve can be used for hydrocarbons. The ISO 5211 mounting pad enables standardised actuators to be mounted. The AP-RE (adjustable stops) actuator pneumatic motorisation is available in double and spring-return with numerous options.

1113-1114 BUTTERFLY VALVES WITH AP RE PNEUMATIC ACTUATORS

AP RE PNEUMATIC MOTORIZATION

The ALPHAIR RE motorization proposed as standard comprises:

- rack and pinion actuator of anodised aluminium.
- a safety coefficient of 1.3 minimum compared to the nominal torque of the valve.
- air non-lubricated dry motor, minimum 6 bar pressure.
- an upstream / downstream pressure difference $\Delta P=20$ bar max.

The actuator mounting is direct apart from the DN250 with RES (yoke + stainless steel driver according to the EN 15081 standard).

INSTALLATION IN AN ATEX ZONE

For 1113-1114+AP RE automatic valves to be installed in ATEX 1, 2, 21 or 22 zones, this has to be specified when ordering. Our services will check of the assembly, the installation of an earthing braid, and will issue an assembly certificate. Our authorized technicians carry out these operations in the workshop. Please contact us. The special assembly and maintenance instructions for motorised valves in the ATEX zones must be followed.
